

Roto Awning Operator and Bracket

Roto has simplified and improved the attach/detach function of the awning operator from the awning bracket for easier installation in the plant and serviceability in the field. This will require a new awning operator and bracket, both with new part numbers.

The only change to the operator is the connection point. The new operator will still fit into the same route and not require any different processing.

New operator

Features and Benefits of the New Design

To connect: Swing the awning bracket hook away from the bracket into the "open" position. Place the end of the operator into the slot on the awning bracket. Swing the clip back into the "closed" position.

To disconnect: Swing the awning bracket hook away from the bracket into the "open" position. Press down on the operator arms, enough to separate from the bracket.

- New all 304 SST awning bracket
- Stronger and more durable than the current awning connection
- Surface mount and dual mount options
- Awning bracket features a center mark for easy installation

Please see part changes on the next page for a smooth transition.

Review your current inventory levels to ensure a balanced stock on your current operator and awning bracket. Samples of the new operator and awning bracket are being provided to allow you to apply and become familiar with the products and their features.
